

ConteX

Your Key Component to Innovative Documentation

- *An innovative, single-source solution for your documentation.*
- *Supports Microsoft Word, Adobe FrameMaker and leading XML editors.*
- *Enables authors, SME's, translators and end users to effectively author, manage and distribute high quality, efficient documentation.*

Content Component Management

ConteX manages documentation on the level of components. Components are compiled together to form documentation deliverables.

Enhance efficiency - Reuse content elements across your documentation set, while maintaining a single content source.

Ensure Content Accuracy - Updating a content element ensures that all documents using that element are updated accordingly. Automated alerts help you manage changes.

Save time - authors, reviewers, translators and end users receive and use the exact content they need. The results lead to better quality, lower cost and quicker turnaround.

Better serve your customers - easily create customized information packages that provide your end users with the most accurate, relevant information that they need, in their choice of format.

Natural DITA environment - with ConteX you can organize your topics based on your information architecture, create content maps for deliverables, easily see where topics are being used and set relationship tables.

ConteX was built ground-up for technical publications, providing a wide range of capabilities that improve the authoring, management, publishing and translation processes, while generating an immediate high value for your organization.

Complete Content Lifecycle

Management

Configuration management

- ❖ Check in, check out
- ❖ User authorization
- ❖ Document status
- ❖ Versioning
- ❖ Release management
- ❖ Workflow management
- ❖ Integration with enterprise
- ❖ DMS, PDM, and ERP systems

Content Mapping

ConteX provides improved content availability by categorizing content using Topic Map architecture, allowing users to easily filter out relevant information and allocate content resources as needed.

Content collaboration

ConteX enables authors, SME's, publishers and end users to collaborate by providing tools for information gathering and review. ConteX provides one central repository that shares and controls content flow between all parties involved in the authoring, translation and publishing of technical content.

Content Retrieval

ConteX includes a powerful search and filtering engine that enables users to receive accurate information based on content metadata and textual information.

About us:

Founded in 1993 IFN provides innovative content management solutions to organizations worldwide. With over 100 professionals IFN helps you maintain an advantage in a competitive environment by maximizing operational efficiency and productivity.

Translation

Avoid repetitions. Using the ConteX component-based architecture, translators receive only those content elements that were changed in a way that requires re-translation. This translates into significant savings in money and time to delivery.

Publishing

Multiple Formats

Simply publish any document to popular formats including PDF, HTML, online Help, XML, SGML (including ATA1100 and S1000D) and IETM.

Custom Publishing

Set Metadata and Effectivity –

Assign metadata to content components, including products applicable, audience, and any other conditional parameters. You define the metadata fields important for your needs.

Set Conditional Tags and Variables –

Manage conditional tags and variable values using the ConteX interface. Control variable values on the context of the document being published.

Filter the Tree –

Filter the repository according to product version, audience or any other criteria important to your organization to view and publish only the relevant content components.

Simply publish any document to popular formats including PDF, HTML, Online Help, XML, SGML and IETM
